START ON RETRENCHMENT

Railroads in the Northwest Stop All Construction.

St. Paul, June 15.-The Pioneer Press today says that the policy of retrenchment threatened by the railroads because of the federal activity in preventing the proposed increase in freight rates is being put into force and that the plan is not confined to this part of the country. So far it has meant the laying off of 10,000 laborers in the northwest. Orders have been received from headquarters to stop practically all new construction work plans for the proposed extensions and betterments have been temporarily dropped.

The skin is composed of two distinct layers. One is known as the epidermis, or outer skin, which has no fibres, and serves principally as a covering to the body. and a protection from outward dangers to the delicate flesh beneath. The other layer is known as toe derma, or true skin, and is composed of elastic fibres, fat tissue, glands, lymphatics, nerves, etc. The thousands of tiny veins and arteries with which it is interlaced constantly

supply every fibre and tissue with healthful properties from the circulation to keep the skin smooth and perfect. This is changed, however, when the blood becomes infected with humors, acids or impurities. Instead of constantly supplying rich, nutritive properties to the skin, the circulation deposits the aerid impurity with which it is contaminated, into the sensitive fibres and
